Healthy Planet, Healthy People

Footprint's products address these planet and human health issues:

- Plastic and their forever chemicals pose a long term threat to our food, our planet and our health
- By 2050, plastic pollution will outweigh all marine life in our oceans
- Toxic chemicals in plastic decrease testosterone leading to infertility and cardiovascular disease mortality
- Endocrine system disorders, like Type 2 Diabetes, are rapidly increasing based on toxic chemicals increases in humans bodies
- Plastic toxins in pregnant mothers can lead to Gestational Diabetes; babies are born pre-polluted with over 200 chemicals
- The functional properties of plastic are difficult to replicate with PFAS free plant-based solutions
- Incumbents have been unable to deliver a credible fiber-based alternative
- Microplastics are everywhere: in our air, our water supply, our food chain, and our bodies
